Splunk Solution Offerings

Arcus Data has deployed over 250 large scale Splunk environments with a variety of use cases across several different industry verticals.

- **Enrich:** increase the value of the data indexed in Splunk effortlessly

- **Analyze:** utilize turn-key solutions to get to the data that matters most

- **Maximize:** increase the potential of Splunk and the value of your technology investments across the organization

- **Enable:** empower your team to be more effective and efficient by utilizing our knowledge base and best practices

Arcus Data has spent the last 10 years working with Global 1000 customers in some of the most complex and secure Splunk environments. Through this experience we have compiled a vast repository of use cases, templates and custom content to help our customers reduce deployment times, increase utilization and expand their vision of what is possible with Splunk.

Vertical Industry Solutions
– Gain business relevant insights from your complex, distributed environment to make better, data-driven decisions in.

Automation Frameworks
– Take advantage of our domain knowledge and experience to simplify the ways in which your technologies work with each other most efficiently.
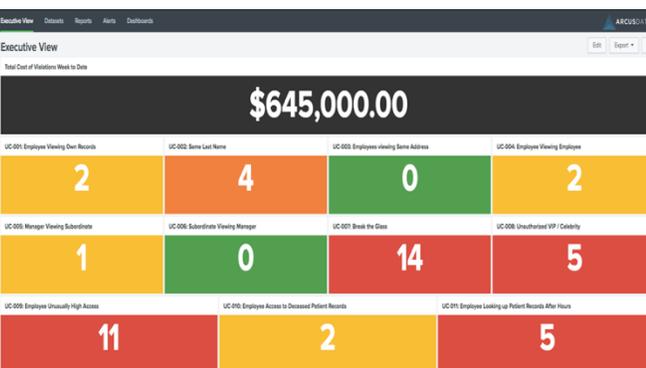

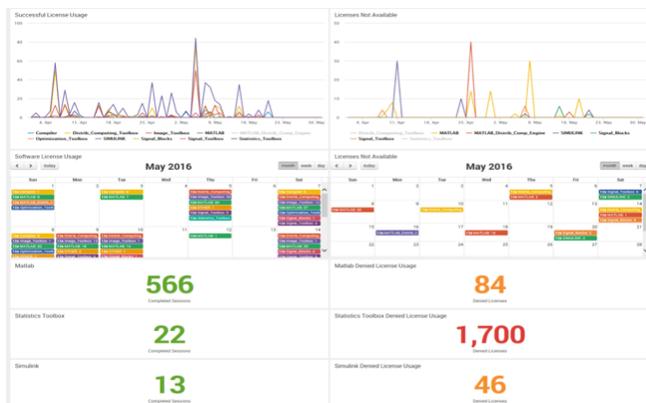

Cloud Platforms
– From adoption to migration and monitoring, our solutions help you evaluate and deploy the right cloud for each individual workload.

Hosted Solutions
– Consolidate and normalize the delivery of some of the industry's leading technologies so that you can focus on what is important to your business.

The Arcus Insights™ use case library aggregates content derived from 10+ years and hundreds of deployments allowing your team to quickly access relevant information, presented in a manner aligned with the given use case or industry vertical. New use cases and feature rich content are constantly being developed and the Arcus Insights™ solution provides the perfect interface to gain visibility into our product roadmap as well as make enhancement requests. Some of the highlights of the current catalog include:

E-Commerce, Retail & Supply Chain

On the busiest shopping days traditional order tracking systems struggle to keep up. This leads to inaccurate forecasts, understaffed departments, overwhelmed employees and delayed deliveries. Our solutions have helped F500 retailers better assess demand and prepare internal teams appropriately while sharing real-time information with shipping and logistics partners to improve the estimated date of delivery. Our e-commerce, POS and supply chain solutions have led to significant increases in revenue as well as customer satisfaction ratings.

Business Analytics

As investments in technology grow within an organization, the complexity of monitoring and managing the use, access and expansion of those investments can be overwhelming. Who is using which technology assets and when? Do we need to buy more or reduce our spend? Have key personnel been denied access to critical systems? Our solutions have identified millions of dollars in unused or misallocated technologies allowing customers to reduce wasteful spend and increase productivity.

Regulatory Compliance

Modern Healthcare organizations are faced with numerous compliance related challenges related to patient privacy and more recently, EHR data. Since the penalties can reach millions of dollars per year, many vendors attempt to price their offerings accordingly.   Our approach provides a simple yet comprehensive solution that can be deployed quickly and has saved our customers an average of 80 hours per week and >$500k.
