Arcus Insights™

Better data makes better decisions

ARCUS INSIGHTS

- **Streamline:** get up and running quickly, and put routine updates on auto-pilot
- **Optimize:** leverage KPI's and analytics to optimize business & IT processes
- **Expand:** leverage our use case library to get more value out of your investments
- **Enable:** empower your team to be more effective and efficient by utilizing our knowledge base and best practices

Arcus Insights™ provides an intuitive interface that allows your team to ensure your technology investments are making a positive impact on your day to day business. Arcus Insights™ significantly reduces the time consuming manual efforts associated with analytics, cloud and automation technologies by providing several key benefits:

Metrics Driven Analytics
– Transparent visibility into your infrastructure with real-time resource utilization and cost dashboards for both historic and forecasting purposes.

Real-time Collaboration
– Seamlessly interact with other users to leverage pre-built templates that accelerate use case development and allow you to gain more value from your existing solutions
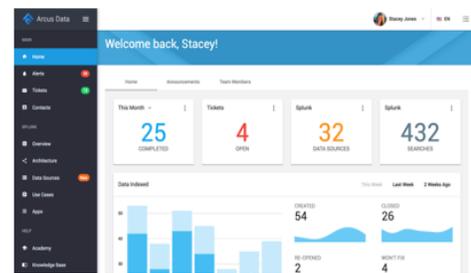

Data Source Explorer
– Break down tribal knowledge with our searchable data source explorer. Get key metrics on your most valuable data.
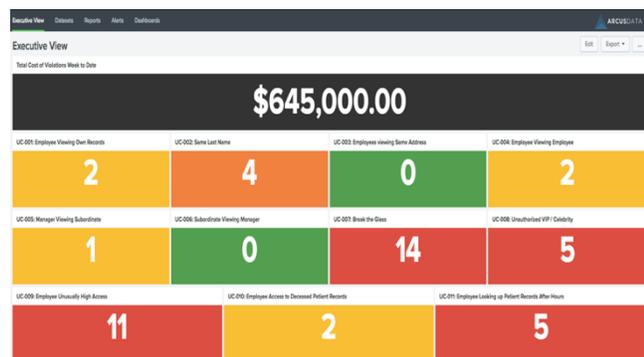

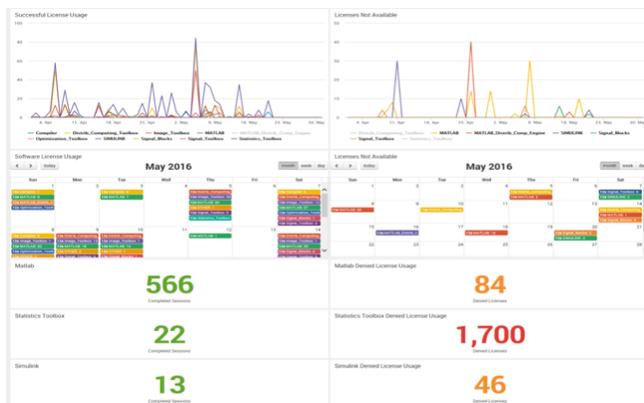

Architecture Viewer
– Today's workloads are constantly changing. Keep up-to-date with our architecture and topology viewer.

The Arcus Insights™ use case library aggregates content derived from 10+ years and hundreds of deployments allowing your team to quickly access relevant information, presented in a manner aligned with the given use case or industry vertical. New use cases and feature rich content are constantly being developed and the Arcus Insights™ solution provides the perfect interface to gain visibility into our product roadmap as well as make enhancement requests. Some of the highlights of the current catalog include:

E-Commerce & Supply Chain

On the busiest shopping days traditional order tracking systems struggle to keep up. This leads to inaccurate forecasts, understaffed departments, overwhelmed employees and delayed deliveries. Our solutions have helped F500 retailers better assess demand and prepare internal teams appropriately while sharing real-time information with shipping and logistics partners to improve the estimated date of delivery. These solutions have led to significant increases in revenue as well as customer satisfaction ratings.

Resource Utilization & Optimization

As investments in technology grow within an organization, the complexity of monitoring and managing the use, access and expansion of those investments can be overwhelming. Who is using which technology assets and when? Do we need to buy more or reduce our spend? Have key personnel been denied access to critical systems? Our solutions have identified millions of dollars in unused or misallocated technologies allowing customers to reduce wasteful spend and increase productivity.

Healthcare: Patient Privacy Monitoring

Modern Healthcare organizations are faced with numerous compliance related challenges related to patient privacy and more recently, EHR data. Since the penalties can reach millions of dollars per year, many vendors attempt to price their offerings accordingly.   Our approach provides a simple yet comprehensive solution that can be deployed quickly and has saved our customers an average of 80 hours per week and >$500k.

Gain Insights Today

Arcus Insights is offered as an annual subscription based on the size of your IT environment and use case requirements.
